CODE RUSH 2026

PeakAlert

Disaster & Safe Zone Community Mesh

“Don't just receive an emergency alert. Know what to do next.”

TEAM: PEAK PROTOCOL

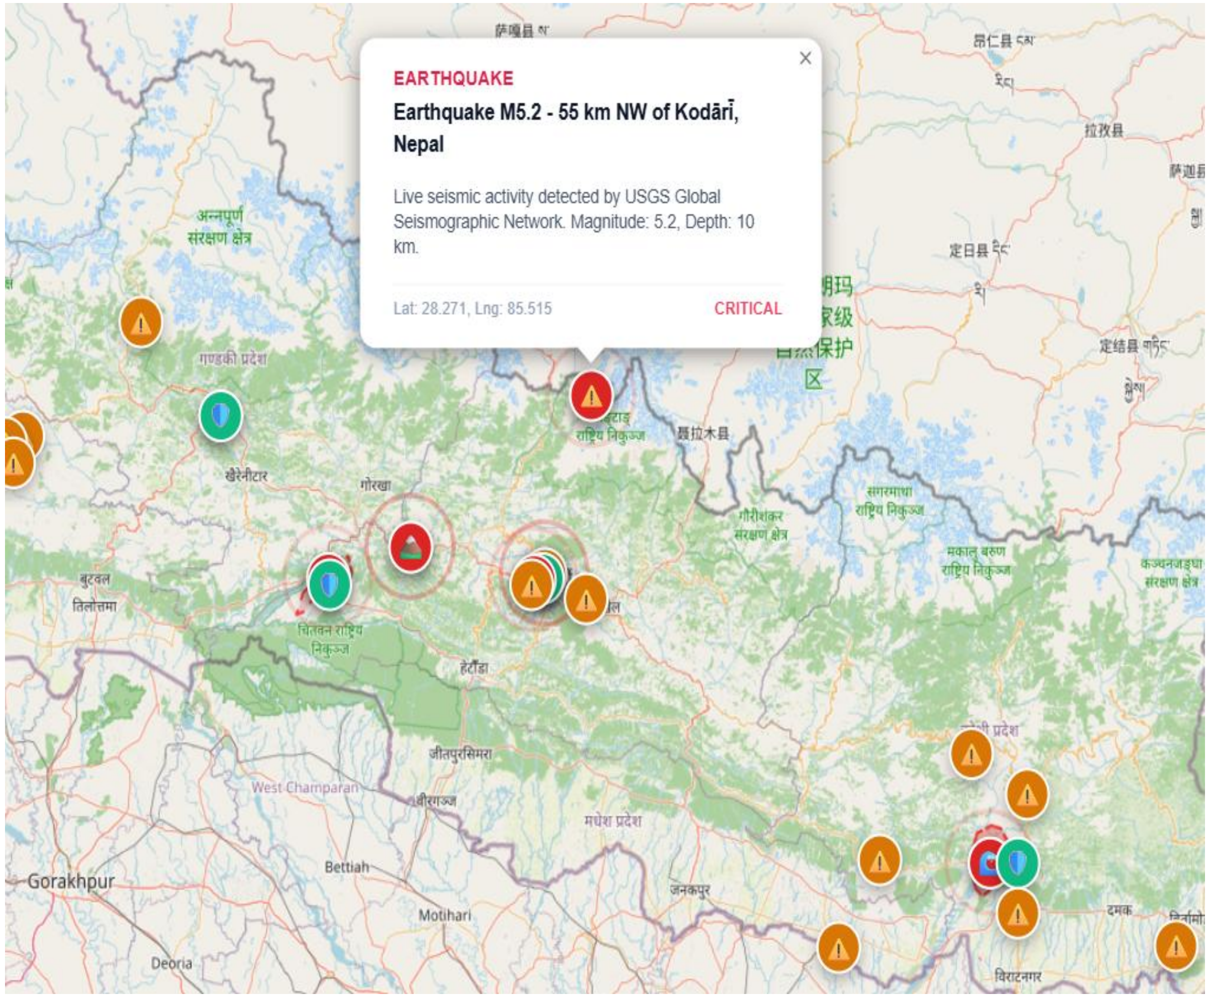
SUMADH RAJ GURUNG
KRITAN DAWADI

LIVE EMERGENCY VIEW



01 • THE PROBLEM

Knowing there is danger is not enough.

Three failure points turn an alert into uncertainty.

01

Information fragmentation

Reports, locations and response context live across disconnected channels.

02

Connectivity limitations

Internet-dependent workflows can fail when infrastructure is disrupted.

NETWORK

03

No clear next action

Citizens need a practical path from warning → safe zone → response.

WHAT NEXT?

02 • OUR SOLUTION

DANGER → PEAKALERT → ACTION

A single workflow connects detection, decision and response.

DANGER	PEAKALERT	ACTION
Live hazards Incident reports GPS + evidence	AI triage Realtime view Offline fallback	Safe-zone guidance Emergency actions Responder visibility

- Live hazards
- Safe zones
- Incident reporting
- Verification
- Low-bandwidth
- Offline queue

Safe-zone capacity/distance should be shown only where the implementation has that data.

03 • LIVE DEMO

The hero moment: from alert to action.

Keep this slide on screen while the product demo runs.

PEAKALERT

EMERGENCY MODE

CRITICAL • FLOOD

SAFE ZONE • 1.2 km

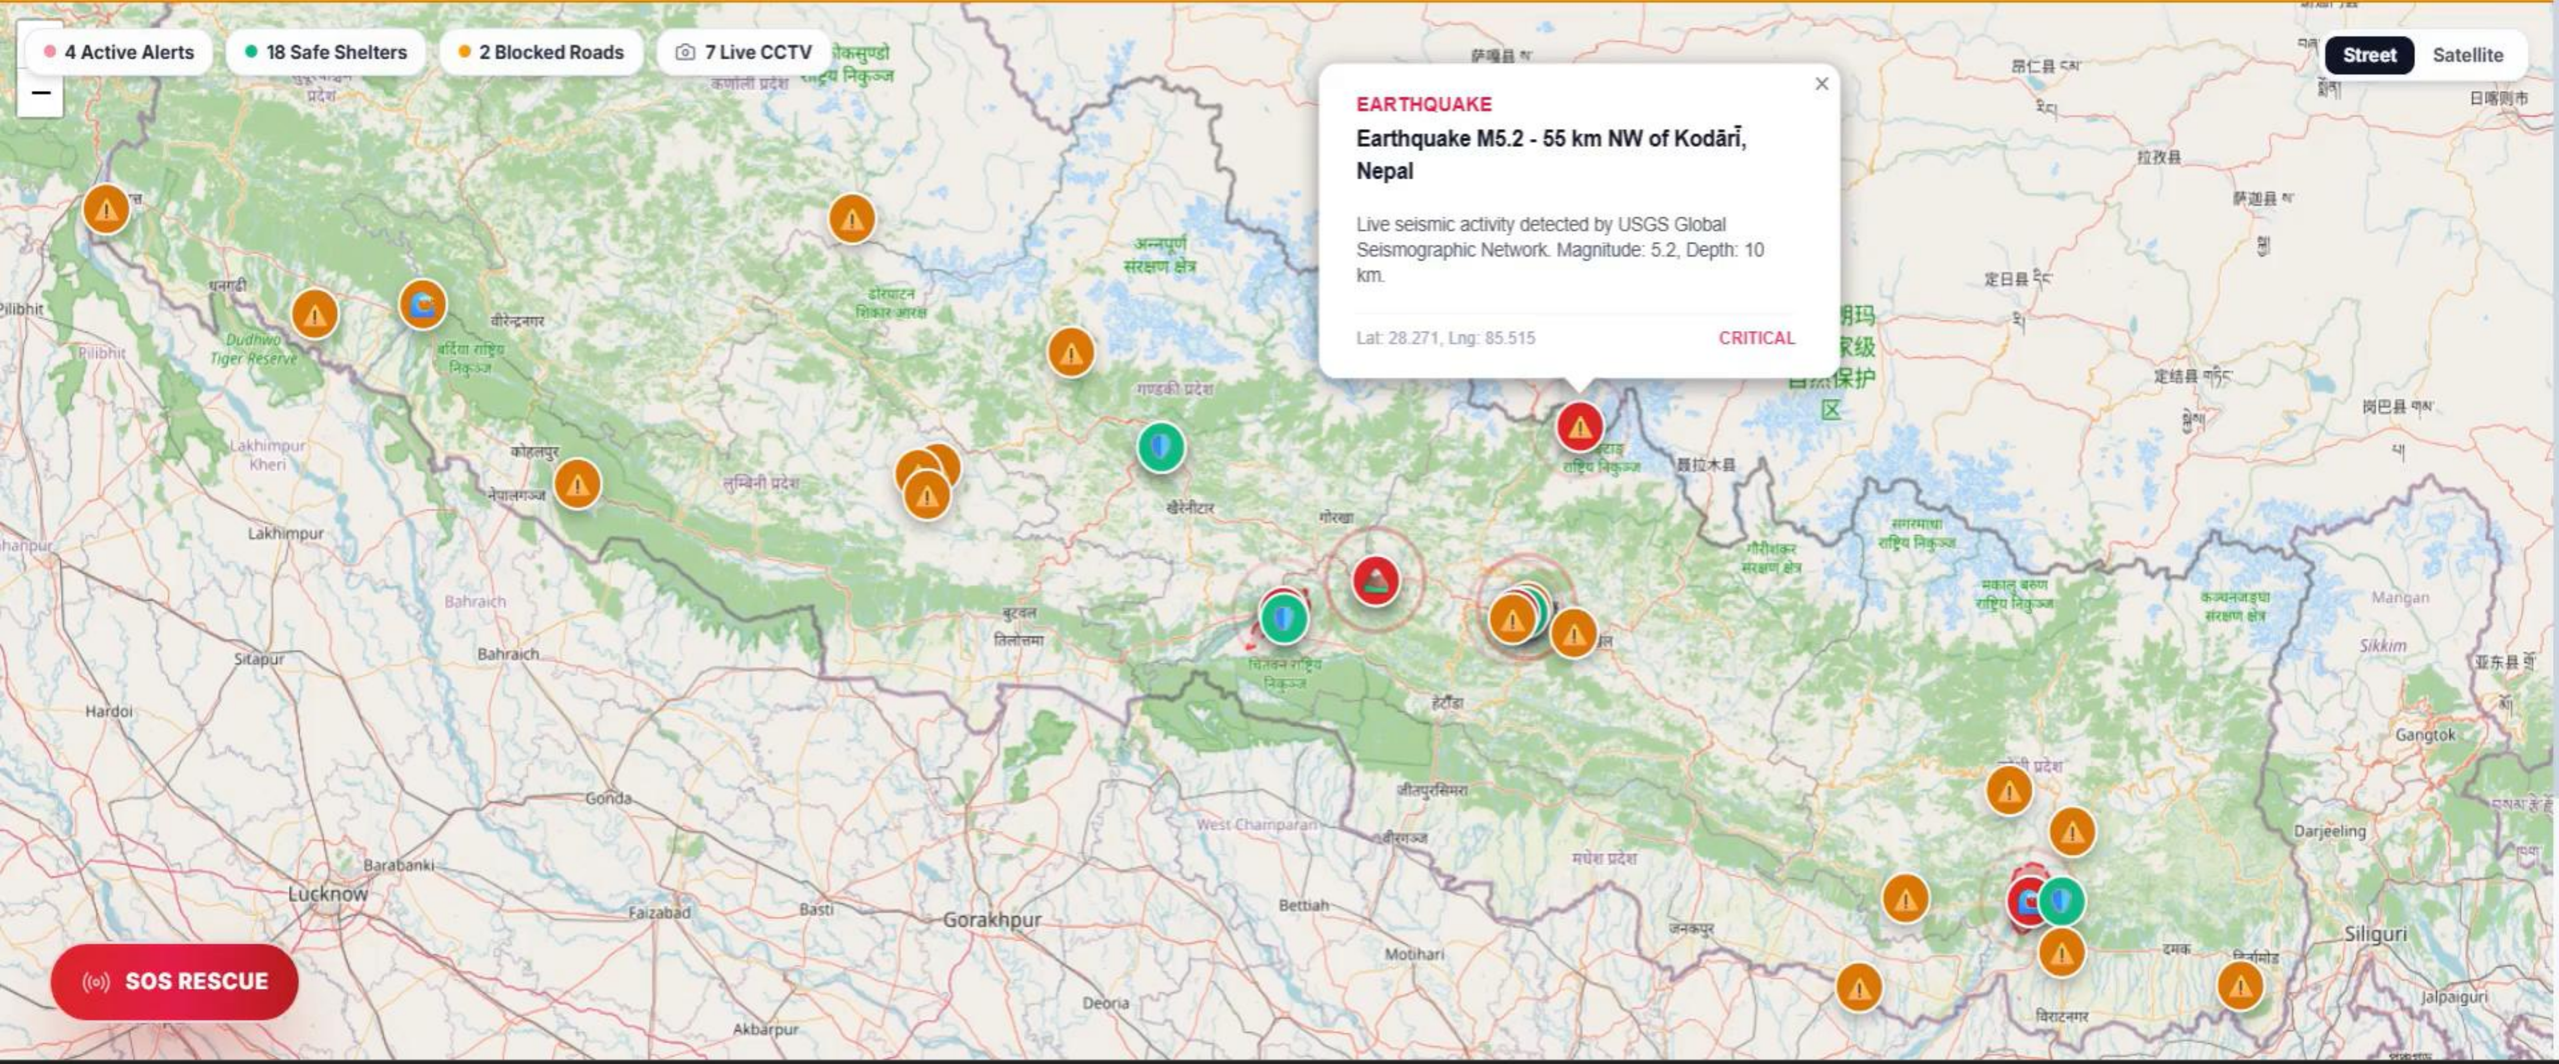
Live Disaster APIs Synced: Located 23 real-time hazard events (USGS & BIPAD Portal).



Resilient by architecture.

Use only technologies and capabilities actually present in the build.

EXPERIENCE	**React 18 / Vite**	PWA • responsive UI • low-bandwidth assets
GIS	**Leaflet/ React-Leaflet**	Incident overlays • shelter markers • GPS
DATA	**Supabase / PostgreSQL**	Incident records • spatial data • realtime
AI	**Risk classification**	CRITICAL • MODERATE • LOW
LIVE DATA	**OSRM+USGS+BIPAD+OPEN-METEO**	Safe route generation • live disaster feeds

GIS • OFFLINE-FIRST • REALTIME • AI • RLS • PWA

Built for Nepal. Designed to scale.

The geographic scope is a framing target, not a claim of current deployment.

7	77	753
Provinces	Districts	Local Levels

WHO IT SERVES

- Citizens
- Tourists
- Volunteers
- Responders
- Local authorities

FUTURE SCOPE

- Government data integration
- Telecom / SMS
- More languages
- Advanced mesh
- Satellite

Scope shown here follows the supplied roadmap; future items are not presented as current integrations.

Why PeakAlert?

“PeakAlert doesn't just tell people where danger is. It tells them what to do next.”

DETECT

Hazard + incident context

DECIDE

AI + GIS + realtime

ACT

Safe zone + response workflow
